PHETEGO TJIE

JUNIOR SOFTWARE DEVELOPER | SOFTWARE ENGINEERING | AI DEVELOPMENT

Cape Town, Western Cape, South Africa | phetegotjie@gmail.com | 066 524 2316 | Code 08 driver's licence

PROFESSIONAL SUMMARY

ICT Applications Development graduate and Software Support professional at Lesaka Technologies, currently working with the Software Development team on AI agents designed to improve customer experience and help resolve client problems. Hands-on experience using Python, SQL, BigQuery and OpenAI technologies, including collecting and preparing client and database information for model training. Has developed working software prototypes and data projects, and is seeking a Junior Software Developer role focused on building reliable, practical applications.

TECHNICAL SKILLS

Programming	Python, Java, JavaScript, TypeScript, VB.NET
AI and Data	AI agent development, model-training data preparation, Pandas, Looker Studio, Excel
Web Development	Flask, HTML, CSS, PHP, REST API concepts
Databases	SQL, BigQuery, MySQL, SQLite, Oracle APEX, database design and validation
Tools and Platforms	Linux, Figma, Salesforce (basic), POS/payment systems
Core Competencies	Object-oriented programming (OOP), debugging, problem-solving, systems analysis, software testing, computer architecture fundamentals

PROFESSIONAL EXPERIENCE

Software Support | AI Agent Development | Lesaka Technologies | Cape Town

March 2026 – Present

- Work with the Software Development team to build AI agents that simplify the customer experience and help resolve client problems.
- Take weekly technical tasks from the Head of Development and deliver solutions; recently proposed human escalation as a fallback when an AI agent fails or is uncertain.
- Collect and prepare client and database information using SQL, BigQuery and Python to support model training and improve agent responses.
- Extend the SmartTrain hackathon concept into an independent development project.
- Troubleshoot software, database and business-system issues, and feed recurring client problems back into agent training.
- Write SQL queries for data extraction, reporting and issue investigation, and validate information used by business applications and reports.
- Support software applications and POS/payment systems in a fintech environment.

Developer and Data Analyst Intern | Samsung Innovation Campus, Walter Sisulu University

February 2025 – December 2025

- Built Python-based programming and data analysis projects as part of the Samsung Innovation Campus programme.
- Practised data cleaning, sorting, transformation and analysis using Pandas, and explored data visualisation and insight extraction from structured datasets.

SELECTED SOFTWARE PROJECTS

SmartTrain (Python, Flask) – Personal Project: AI-powered training management and scheduling prototype that organises client training requests, supports assignment and scheduling workflows, and provides database-backed case management and a dashboard. Designed to reduce manual coordination by streamlining the training workflow.

Ticketing System (Hackathon): Built a support ticketing application that records and tracks requests through a full lifecycle, from ticket creation and management to resolution.

SME Support System (Hackathon): Developed an AI-powered SME support prototype with backend functionality designed to help small businesses access support and guidance.

POS Sales Analytics (SQL, Looker Studio): Analysed transactional sales data and prepared reusable reporting views and visualisations to help users review sales performance.

Weather Trend Analysis (Python, Pandas): Cleaned and transformed weather datasets, then analysed the data to identify trends and patterns.

Academic Projects (HTML, CSS, PHP, MySQL, Java): Developed web applications and relational databases, applying programming, database design and systems analysis.

EDUCATION

National Diploma in ICT: Applications Development | Walter Sisulu University | 2025

Relevant coursework: Software Development, Object-Oriented Programming (OOP), Database Development, SQL, Web Development, Systems Analysis and Design, Information Systems, Software Engineering.

CERTIFICATIONS

- Certificate of Competence in Coding and Programming | Samsung Innovation Campus (completed 20 December 2025)
- Python Programming and Data Analysis | Samsung Innovation Campus
- Python Essentials 1 | Cisco Networking Academy
- Full Stack Development | FNB IT Varsity
